# Thoth Tech

# Welcome to Thoth Tech!

We build, operate and deploy world class education technologies through our products:
## Splashkit
a C++ Software Development Kit. It is beginner-friendly to assist in introductory programming education, and can be used to create 2D games.

## OnTrack
an innovative Learning Management System that is designed for a skill-based course delivery model.
## Art Gallery
a digital art gallery platform for the displaying and enjoying of art.

## CourseFlow
This project aims to assists students and course directors in course planning and in comprehending the requirements of certain courses

## Operations
a deticated team for monitoring the other products and making their jobs as easier through research documentation.

### About us

This team oversees the entire operations of Thoth Tech and strives to make things easier. We aim to make the onboarding process as smooth and clear as possible, as well as increase the knowledge of our seniors in meaningful ways while creating policies to improve the well being of all company employees. In the short term, we would like to create new documentation,policies, workflows, and processes that are relevant to improve the company's outlook and overall productivity. In the long term, we aim to store documentations in a dedicated website(Docusaurus) to make it easy to push updates, new features, and bug fixes to everyone without the need to gain access to our GitHub repository.
